

## **BioDan announces successful 3D Print preclinical trial with our patented Skin Bio-Inks**

**Madrid, 15<sup>th</sup> September 2014**

BioDan announces that its 3D BioPrinter prototype under development is already working with our patented Bio-Ink materials for printing of SKIN.

This new technology decreases substantially the cost and time of the bioactive skin manufacturing process and opens possibilities for new applications. We have already performed successful preclinical tests, and we are starting the industrial design phase.
